
STANDARDS BULLETIN No : S01-05-002

SUBJECT: Requirement to use approved materials for construction, repair, and maintenance of the Power & Water distribution electricity network.

Purpose:

The purpose of this bulletin is to re-emphasize on the use of approved equipment and materials on Power and Water electricity distribution network as per [Power Approved Materials List](#) .

The Power Approved Materials List provides the detail of all approved items including approved manufacturers and suppliers that are only allowed to be used on Power and Water electricity distribution network.

Approved materials and designs are in place to ensure the correct function, operation, reliability, and safety of the Power Services electricity network.

Reason:

There have been recent occurrences where unapproved items were supplied and installed at Power and Water electricity network. The matter is currently under review and assessment.

Requirements:

You are advised to strictly adhere to the use of approved materials for new construction, repairs and maintenance of Power and Water electricity distribution network. Failing to comply with this requirement will result in incurring extra cost to replace and remove an unapproved item along with associated delays and inconvenience.

This list is published on the Power & Water public web site www.powerwater.com.au, specifically at the following location URL location.

<https://www.powerwater.com.au/developers/drawings-and-downloads/standard-drawings>

The use of alternate products and designs can only be permitted, once approved by Asset Management department.
